

Windsor Door

1035 Premium Builder Door

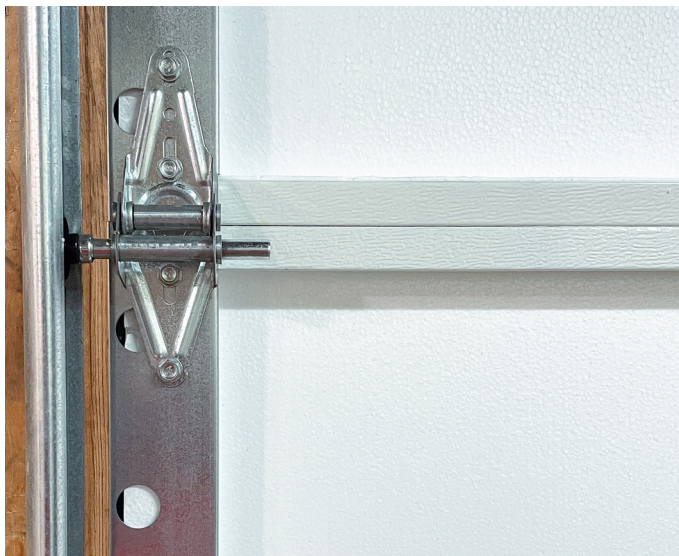

**Windsor Door builds
more than doors,
we build futures**

The NEW Windsor Door

Based in Little Rock, Arkansas, Windsor Door has proudly manufactured premium garage doors for over six decades. Our doors are constructed from clean, U.S.-sourced steel and produced on our new, industry-leading high-speed production line.

Every Windsor door is designed to meet the needs of our national and regional homebuilding partners.

1035 Specifications

All designs are built with 25ga prepainted steel. The sections are 2" thick, the edges are hemmed, and tongue and groove joint add strength and keeps the outside out.

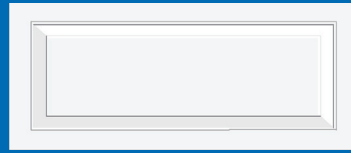

TOX fastening system attaches the stiles with the end stiles being attached to the face of the door to add strength and durability.

The model 1035 comes standard with 1/2" CFC-FREE laid-in-place polystyrene insulation.
